

CM 22230 – BUFFERED NaCl-PEPTONE SOLUTION, pH 7.0 (USP/EP/JP/BP/IP)

INTENDED USE

Dilution fluid for samples in case of microbiological contamination.

PRODUCT SUMMARY AND EXPLANATION

The composition of this medium is as per USP and is in accordance with the harmonized methodology of USP/EP/ BP/JP. This medium is recommended for preparation of stable test strain suspension employed for validating the microbiological testing procedures of non-sterile products. The standardized stable suspensions are used so that the suitability of this test to detect microorganism in presence of product can be established. Non-fatty products insoluble in water and water soluble products are diluted/dissolved using this solution.

COMPOSITION

Ingredients	Gms / Ltr
Peptone	1.000
Potassium dihydrogen phosphate	3.600
Disodium hydrogen phosphate	7.230
Sodium chloride	4.300

PRINCIPLE

Peptone (meat or casein) serves as nutrient source and maintains the cell viability. Phosphates in the medium act as good buffering agents. Sodium chloride maintains the osmotic balance and cell integrity. Polysorbates reduce surface tension and also inactivate phenolic compound, if present in the test sample.

INSTRUCTION FOR USE

Label the ready to use bottle. Inoculate the sample and incubate at specified temperature and time.

QUALITY CONTROL SPECIFICATIONS

Appearance of Prepared media	: Colourless solution.
Sterility test	: Passes the release criteria.
pH (at 25°C)	: 7.3±0.2
