

CM 22317 – MOLECULAR TRANSPORT MEDIUM

INTENDED USE

For the stabilization, transportation and inactivation of infectious viral agents.

PRODUCT SUMMARY AND EXPLANATION

Molecular Transport Medium is intended for the safe collection, stabilization, transportation and inactivation of infectious viral agents from the collection site to the testing laboratory.

Molecular Transport Medium (Viral Lysis Transport Medium) is designed for stabilization, inactivation and transportation of potentially infectious, unprocessed nasal and throat swab samples suspected of containing infectious viruses. It is designed to kill the viruses whilst preserving the released intact nucleic acids for molecular diagnostics. The composition of the medium has been optimized in such a way that it disturbs/lyse lipid membranes, destroys proteins including enzymes and nucleases which helps in keeping the naked RNA stable and well preserved within the sample.

Molecular Transport Medium (Viral Lysis Transport Medium) makes the sample safe for transportation, shipment and processing at ambient temperature and allows accurate detection of microbial DNA/RNA using molecular methods. Unlike traditional transport medium, molecular transport medium does not keep the viruses viable, rather only maintains the integrity of the viral genome. This leads to improved test performance with better turn-around time, sensitivity, specificity, precision and reproducibility as compared to traditional tests. Moreover, considering the potential infectivity of the suspected samples and the risk involved in handling them during collection and transport, sample inactivation is desired for ensuring safety. This medium has been customized for the inactivation of potentially infectious biological pathogens ensuring safety during handling, transport and processing. Thereby, assuring safe and risk-free handling of suspected samples.

COMPOSITION

Components	Composition
Molecular Transport Medium (Viral Lysis Transport Medium)*	Proprietary

*1.5ml medium in 10-15 ml tube

QUALITY CONTROL SPECIFICATIONS

Appearance	:	Colorless
pH (at 25°C)	:	8.0
Sterility Check	:	Passes release criteria

INSTRUCTION FOR USE

Label the sample correctly with name of patient, time and date of collection. Inoculate the sample and transport the samples immediately to the laboratory for processing.

STORAGE AND SHELF LIFE:

Store at room temperature, away from bright light. Use before the expiry date. Sample collected can be stored at ambient temperature for 7 days, 2-8°C for 15 days, -20°C for 1 month and -80°C for 1 year.
