

CM 22335 - PLATE COUNT AGAR (γ - IRRADIATED) (TRIPLE PACK)

INTENDED USE

For determination of plate counts of microorganisms in food, water and waste water.

PRODUCT SUMMARY AND EXPLANATION

Plate Count Agar is formulated as described by Buchbinder et al which is recommended by APHA and FDA. The poured plate count method is preferred to the surface inoculation method, since it gives higher results. Plate Count Agar is also suitable for enumerating bacterial count of sterile rooms.

The media are gamma irradiated in the packaging material to assure a reduction of the microbial load potentially present in the medium, on the dishes, and on the packaging materials.

COMPOSITION

Ingredients	Gms / Ltr
Agar	15.000
Dextrose	1.000
Yeast extract	2.500
Tryptone	5.000

PRINCIPLE

Tryptone provides nitrogenous and carbonaceous compounds, long chain amino acids, and other essential nutrients. Yeast extract supplies Vitamin B complex. APHA recommends the use of pour plate technique. The samples are diluted and appropriate dilutions are added in Petri plates. Sterile molten agar is added to these plates and plates are rotated gently to ensure uniform mixing of the sample with agar.

INSTRUCTION FOR USE

Either streak, inoculate or surface spread the test inoculum aseptically on the plate.

QUALITY CONTROL SPECIFICATIONS

Appearance	:	Light yellow colored medium,
Quantity of Medium	:	25ml of medium in 90mm plates.
pH (at 25°C)	:	7.0± 0.2
Dose of Irradiation	:	15.0-25.0 kGy
Sterility Check	:	Passes release criteria

INTERPRETATION

Cultural response was observed after incubation.

Microorganism	ATCC	Inoculum (CFU/ml)	Growth	Recovery	Incubation Temperature	Incubation Period
<i>Escherichia coli</i>	25922	50-100	Luxuriant	≥70%	35-37°C	18-48 Hours
<i>Bacillus subtilis subsp. spizizenii</i>	6633	50-100	Luxuriant	≥70%	35-37°C	18-48 Hours
<i>Enterococcus faecalis</i>	29212	50-100	Luxuriant	≥70%	35-37°C	18-48 Hours

<i>Staphylococcus aureus subsp. aureus</i>	25923	50-100	Luxuriant	>=70%	35-37°C	18-48 Hours
<i>Lactobacillus casei</i>	9595	50-100	Luxuriant	>=70%	35-37°C	18-48 Hours
<i>Streptococcus pyogenes</i>	19615	50-100	Luxuriant	>=70%	35-37°C	18-48 Hours
<i>Pseudomonas aeruginosa</i>	27853	50-100	Luxuriant	>=70%	35-37°C	18-48 Hours

PACKAGING:

Triplelayered packing containing 5 number of plates with one silica gel desiccant bag packed inside it.

STORAGE

On receipt, store the plates at 15–30 °C. Avoid freezing and overheating. Do not open until ready to use. Prepared plates stored in their original sleeve wrapping until just prior to use may be inoculated up to the expiration date and incubated for recommended incubation times. Allow the medium to warm to room temperature before inoculation.

Product Deterioration: Do not use plates if they show evidence of microbial contamination, discoloration, drying, cracking or other signs of deterioration.

DISPOSAL

After use, prepared plates, specimen/sample containers and other contaminated materials must be sterilized before discarding.
